**Do you or someone you know have
head and neck cancer that has spread?**

Learn more about a new clinical research study.

EXELIXIS[®]

What is a clinical research study?

Clinical research studies help researchers and doctors learn whether a study drug is safe and if it works to treat a certain disease or condition.

Each study has requirements for who can or cannot join. This is called the eligibility criteria. You can volunteer to take part in a study if you meet these requirements. You can choose to stop taking part in the study at any time.

You will not be paid to take part in this study, but you may be paid back for reasonable travel costs during your participation. Ask the study team for more details.

Who can take part in STELLAR-305?

You may be eligible if all these apply*

You are at least 18 years of age

You have head and neck cancer that continues to grow or spread

You haven't had treatment for your head and neck cancer, or prior treatment happened before the cancer spread

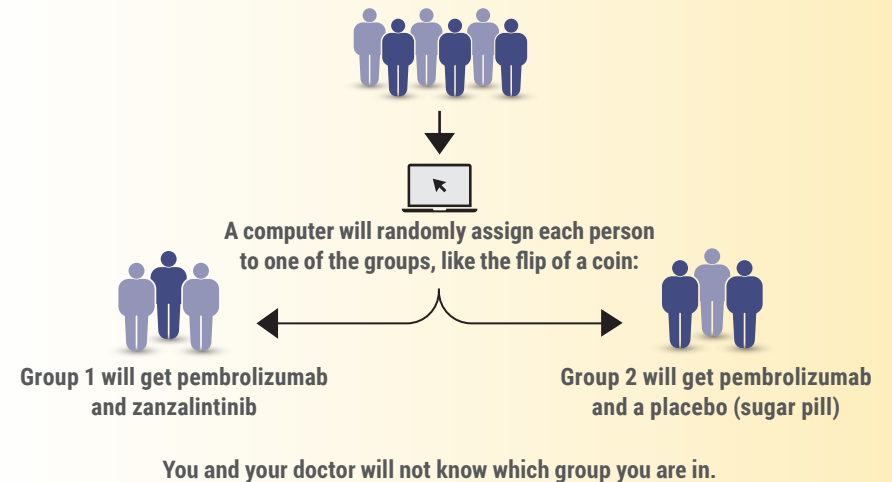

*There are other eligibility criteria you must meet to join the study.

THE COMBINATION OF PEMBROLIZUMAB AND ZANZALINTINIB HAS NOT BEEN APPROVED BY REGULATORY AUTHORITIES. THE EFFECTIVENESS AND SAFETY OF THIS STUDY TREATMENT HAS NOT BEEN ESTABLISHED AND IS BEING STUDIED AS PART OF THIS CLINICAL TRIAL.

About the STELLAR-305 study

STELLAR-305 is a clinical research study to see how the drugs pembrolizumab and zanzalintinib work together when used as a first treatment for head and neck cancer that has come back (recurrent) or spread to other parts of the body (metastatic).

People in the study will be put into a treatment group. Everyone in both groups will get the standard treatment of pembrolizumab combined with either the new study drug or a placebo.

During the study, you will:

- Visit the study doctor 2-3 times per month for treatment and tests
- Have your health checked and be watched for any side effects

You may stay on the study as long as you benefit from the study drugs or until the study doctor thinks you should stop.

STELLAR³⁰⁵

Talk to your doctor to learn more about this study and if it may be an option for you.

Questions for your doctor:

- 1** Do I have recurrent or metastatic head and neck cancer?
- 2** Can we go over the treatments I have had?
- 3** How often would I come in for treatment or visits if I take part in the study?
- 4** What do I need to know about taking part in a clinical research study?
